HYLILIAN BREDER OF THE ORIGINAL HYLILLIES

BLOODHOUNDS

Available in red, black and tan. Sells $11.00 for colored pictures and details. C.B.S. BLOODHOUNDS Puppies
Route 1, Kingman, Kansas 67068

A month after my arrival I had to return to Nebraska to attend a retriever hunting course (he was a gamekeeper, too, E.B.K., during which I was introduced to a golden retriever, which was a golden retriever). He was wonderful as well, and was affectionate in a way that had never been experienced before. He was extremely well-bred, having been raised on the best lines and had received extraordinary care and training. His coat was flawless and his eyes were a bright, sparkling yellow. He was just an incredible dog, and I knew that I would never forget him. He was named Tidbit, and he was a golden retriever.

However, my favorite part of him was his personality. He was so friendly and loving, and he always knew how to make people feel comfortable. He was a true gentleman, and I know that he will be missed by everyone who knew him. He was truly a once-in-a-lifetime kind of dog.

NORWEGIAN ELKHOUNDS

NORWEGIAN ELKHOUNDS

THE ORCHARD HOUND CLUB OF AMERICA

The club is located in 430 West 10th Street, Suite 120, New York, NY 10014. They can be reached at (212) 692-9000. The club is always looking for new members, and it is a great place to meet other hound enthusiasts. They have a variety of events throughout the year, including the annual hound show, which is one of the most prestigious in the country. They also have a hound conservation program, which is dedicated to preserving the hound breed for future generations. They have a variety of hounds, ranging from the small, agile Japanaese Hound to the large, powerful English Hound. They are always looking for new members, and they welcome anyone who is interested in hounds.
Norwich. Best Male Puppy in Show was Johan Ostrów's Windhill Olivia, a showy happy red prick ear who went down to the young Welsh Bitch Puppy for Best Puppy and Best in Show. Missy Wood's young dog, Hanniskar's Swedish Wheaton Terrier bitch, Thrump's Lady Winifred, placed second and third in their respective classes. Frank Rogers competently handled his perfectly groomed home-bred Penn Oak Pandora. In Junior Showmanship, judged by Ernd Hallmark, eight year old Lena Hill placed second handling her mother's home-bred Hillian's Plum Bushrod. Marcy and Bob Congdon showed their home-bred littermates, Latians Beecr and Belgrave, two of a litter of four whose dam died the day they were born. Hard work, love, and patience raised that litter. We congratulate the Congdons on their stamina.

The Norwich contingent, including Terry Hill and Linda Plummer, enjoyed the Congdons delicious picnic lunch. Our common interest in Norwich and all terriers develops pleasant friendships.

The Norwich Terrier Club Match Show will be held on Saturday September 30, 1978 at the home of Mr. and Mrs. Philip Hews in Avon, Connecticut. The Judge will be Constance S. Larrabee—Mrs. Sterling Larrabee, King's Prevention, Chesterwood, MA 02620

SEALEYHAM TERRIERS
AMERICAN SEALEYHAM TERRIER CLUB

The Midwest Specialty held on May 27 this year drew an entry of 15 (9-11-1). Mrs. Virginia Hampton passed on the small but spirited entry. WD and BW was Whites' B.B. owned by Mrs. Robert White. RWD was Carled's Case-A-Way owned by the writer. In the Bitch competition Mrs. Hampton chose Ken and Thelma Hewitt's Penlynn Pins And Needles as Winners Bitch. Incidentally, Mr. Hewitt made the long trek from Colorado for the Specialty and ensuing shows and we are grateful to him for his support. Rinkles tone's Fair Fancy selected as RWD is owned by Thelma Robert.

Thelma Miller's Ch. Rinkles tone Reapress was chosen BB with Veteran Ch. Rinkles tone Rusty Buck-a-roo getting the nod for BOS. To add to the laurels for Rinkles tone, Reapress was Group First in a very competitive terrier group. Our sincere congratulations to Thelma Miller for her victories.

The next day at Illinois Capitol at Springfield, Whites' B.B. Penlynn Pins And Needles and Rinkles tone Reapress repeated their victories for BB, BW and BB respectively under judge Dr. Lee Huggins.

We extend our thanks to Thelma Miller not only for her usual fine job in handling the details for the Midwest Specialty, but for providing accommodations for me at the Hotel Rinkles tone.

It is unfortunate that for the most part our Specialties with the exception of Montgomery County are supported by regional members and exhibitors with the result that entries are generally small. The Pittsburgh entry in March drew 22 with scant support coming outside the general area. Admittedly, not everyone can get away for the Pittsburgh or Peoria areas, but if we continue to have specialties in these areas we can hope that greater support might come from other areas of the country so that the size of an entry will improve.

While on the subject of Specialties we are looking forward once again to our annual sojourn to Montgomery County on October 8. Back to back years of miserable weather it is not too much to hope that Dr. Dubeler and her Show Committee will luck out and come up with a beautiful day for Montgomery. This year we will have Mr. Stephen Shaw judging our regular classes with Ken McDermot handling the sweepstakes classes.

As of this writing, the details for our annual dinner have not been finalized, but motel accommodations for Sealyham exhibitors and friends will be handled by the George Washington Motel at King of Prussia, Pennsylvania. For further information and details, please contact the Social Committee Chairman Mrs. Barbara Anthony, 9128 Sheridan St., Sea Breeks, MD 20801.

In a previous column, I reported incorrectly that Howard Stone was elected President of the Sealyham Terrier Club of Southern California. That honor was bestowed to Myron Stone and I apologize to Myron for that error. Howard Stone continues to serve the parent Club as a member of the Board of Governors.

In July, Barbara Carmody, Thelma Miller and Sharon Cowen were in England to help the Sealyham Terrier Breeders Assoc. celebrate their 50th Anniversary. As a follow up to my previous column about the International Sealyham Terrier Society, I had a letter from a Bull Terrier breeder indicating that the Bull Terrier people were also solicited for advertising, subscriptions and material for the International Bull Terrier Society. I dare say that many other breeds are also part of this alleged International Society. Doubt if many knowledgeable breeders will be taken in by this group. See you at Montgomery next month. Don't forget those entries—Jack L. Carmody, 482 Substation Rd., Brunsville, OH 44022

LAKELAND TERRIERS
UNITED STATES
LAKELAND TERRIER CLUB

A revolution is going on in human obstetrics today. Women are now using to be seen by a doctor. I don’t want to feel a thing, and “Whatever you think best, Doctor” not now are taking the position that the physician is an employee, to be used only as absolutely necessary. Why, the change? Just because things have been done a certain way for ten years, doesn’t make that the right way; in spite of ever increasing medical intervention and the supposed superiority of our medical care system, the United States has a much higher infant mortality rate than European countries where home deliveries and midwifery are very common, and where hospital deliveries involve fewer Cesarean and medicated labors. These differences are not due primarily to genetic differences in the ability of American women to bear children—when their obstetric practices are used here there is a reduction in the cesarean delivery rate and the amount of labor and delivery. Apparently the process of parturition is complicated by many elements which result in a normal birth and as the fear, physical unsoundness or illness interfere. I used to think that differences in pain and difficulties of childbirth are entirely an individual thing until I saw what has been accomplished in this area by the Childbirth Educators Association. Experiencing myself an unmedicated labor and delivery made me a dedicated convert.

Before you give up and move to another column that is about DOGS, I’ll get to the point. If surroundings, training, and confidence can have a profound influence on the course of a human birth, why on canine whelping? We are forever being told by research scientists that what they find out about rats is also likely true of humans; can we not also extrapolate a little and assume is true of the human birth experience as applications for our canine friends? The evidence that psychic factors can influence the presence of strange dogs inhibit reflexion for 16-65 minutes after they are (Jacob E. Mosier, D.C. Academy of Veteri seminar, 1974) and a change in surroundings labor to stop for as much as four hours. That human subjects who are "tuned in" and able to relax can cooperate with their efficiently push out quite large babies. Re- your bitch such as SIX LESSONS FOR LITTER and WHHELPING WITHOUT FE you’re afraid, but if there are measures to help you with your bitch in tune to the birth's the aids provided for her by nature.

Where do all wild canids have their private dens where no other animals go. V bitch owners expect them to whelp— in private with no privacy whatsoever. How about another area fraught with well-intentioned needless preparations. In human obstetric aided mandatory to surgically shave the vulva and administer a "3H enema" (Table salt). Now we find it isn’t so nice.

In the dog we have been advised to wash the vulva just prior to whelping. What does it except to remove the normal everyday bacteria, an integral part of the animal and m pathogens for which the animal may not have a specific antibody?

Of all the sense, the sense of smell is a dog. Offactory stimuli are constantly being categorized as good or unfamiliar. In their olfactory impressions have some influence on the initiation and course of labor.

The most important interacting stimulus is through components of the placenta. Bitch returns to the spot she has chosen and young she notes that the smells are the other animals have invaded her privacy. To give our bitches that sort of reassurance count, not keep changing the bedding a wash. Perhaps we are destroying the ability for natural instinct. It does not hurt to run a or room where no one people and certainly no dogs will enter until after her due date. This provides additional privacy that will continue through whelping.

Many books tell you to remove the whelping box where you have given her a natural surface to v usually step aside to deliver the next puppy. The puppy place cannot get there without (Vigorous puppies climb on top of one as the environmental temperature is not too way of keeping them in one spot SoM to feed them without crushing any or the other. One must avoid too many continuous behavior, but studies on humans indicate the baby immediately after birth’s formation the mother-child relationship is reasonable to assume that keeping the puppies away from the mother for days of non-voluntary muscle to contract in the brain the "letdown" of the milk and also care of the uterus to contract. Rather than the dam from whelping, allowing first pups probably facilitates the birth.

Some of the large puppies and some presentations are no problem to a bitch push with her abdominal muscles and. The ability to experience the need for abdominal pressure is a basic
